

# OVERDRIVE DISTORTION OD300

Thank you for showing your confidence in us by purchasing the BEHRINGER OVERDRIVE DISTORTION OD300. This effects pedal is ideally suited for electric guitars. Thanks to its high-performance features you can create state-of-the-art overdrive, distortion or a combination of both effects.

## 1. CONTROLS

Top view

- 1 The *LEVEL* control adjusts the output level.
- 2 The *TONE* control allows you to shape your overall sound.
- 3 The *DRIVE* control adjusts the intensity of the overdrive/distortion effect.
- 4 Use the *MODE* control to adjust the balance between overdrive and distortion effect. In leftmost position you get pure overdrive effect and in the rightmost position you get pure distortion.
- 5 The *ON/BATT* LED illuminates when the effect is activated. It also serves as a battery level indicator.
- 6 Use the footswitch to activate/deactivate the effect.
- 7 Use this 1/4" TS *IN* connector to plug in the instrument cable.
- 8 The 1/4" TS *OUT* connector sends the signal to your amp.

Use the *DC IN* connection at the front of the unit to plug in a 9 V power supply (not included).

The *BATTERY COMPARTMENT* is located underneath the pedal cover. To install or replace the 9 V battery, press the hinges with a ballpen and remove the pedal cover. Be careful not to scratch the unit.

 The OD300 has no on/off switch. As soon as you insert the jack into the *IN* connector, the OD300 begins running. When not using the OD300, remove the jack from the *IN* connector. This extends the life of the battery.

The *SERIAL NUMBER* is located at the bottom.
