

## MAda – Universal mains adapter incl. mounting kit

Version 1.0 of 29.10.2013

The first picture shows what is included with the MAda – universal mains adapter incl. the mounting kit.

To attach the adapter using the mounting kit you need to remove the two screws on the same side of the power supply where the AC mains courtesy outlet is located. Screw the four stand-offs together into two pairs as shown.

Then attach the pairs of stand-offs to the power supply and tighten using the bracket as a wrench. Plug in the adapter and fasten the bracket on top of it using the included two screws.

The next two pictures show the mains adapter attached to the Schizophrenic link power supply underneath a Pedaltrain Junior board.

When a link type power supply is mounted underneath the Pedaltrain board as described earlier in this document, the adapter allows powering of two different devices like ex. a plug-in adapter – one plugged in from the top and one placed underneath the board as shown on following two pictures.

To secure the connection you can use a rubber band or a cable tie to fix the adapter to the bracket as shown below.
